

(54) METHODE OF NOTIFICATION FOR E-MAIL TRANSMITTING AND PROMISE
NOTIFICATION USING SMS-WAP LINKAGE

5

Abstract

Recently, the number of office workers who use e-mail for business are increasing. However, in case that the received e-mail is important, the users are calling
10 to the e-mail sender using phone, thus improvement is required.

According to the method of present invention, the SMS message input through SMS is sent to the receiver automatically by simply confirming only before the user send e-mail. Therefore, according to the method of present invention, a short message is sent to receiver based on the mobile phone number information input in advance
15 without input of new information when the user send e-mail using existent e-mail address information, which gives convenience to the user. Also, the receiver who received SMS can reply to the e-mail sender safe receipt of the e-mail by selecting a message among several reply messages provided in advance.

Also, schedule notifying function, which notify the contents of schedule before
20 scheduled time via SMS to the person who will participate in the scheduled meeting, is provided by linking with a schedule management program.
